SUPPLEMENTAL RESULTS

Resting Metabolic Rate (RMR)

The minimum number of estimated calories your body requires daily, at rest.

1,313 cal/day

Android (A)

This is the lower abdominal region.

52.0%

Gynoid (G)

Fat that is concentrated in the hips, upper thighs, and buttocks.

45.5%

A/G Ratio

*Android fat should be less than Total Body Fat %.
A/G Ratio should be < 1.0*

1.14

VAT

VAT, or Visceral Adipose Tissue, is a specific type of fat that is associated with several types of metabolic diseases such as obesity, metabolic syndrome, and Type 2 diabetes.

This number should be as low as possible, with a target of zero VAT.

BONE REPORT

This report provides a general overview and relative age-matched comparison of your bone strength. *The higher your Z-Score, the better. High bone density is associated with strong, healthy bones.*

Note: this is not a bone density exam, which is a separate assessment reviewed with a medical professional.

MUSCLE BALANCE REPORT

The table below isolates your limbs and compares the fat and lean tissue between your "right side" and your "left side." Small imbalances are common; larger imbalances (>2lbs) may indicate muscle injury and developmental imbalance.

REGIONAL FAT TISSUE REPORT

The following graphs show how fat amounts in different regions of your body have changed over time. These graphs show how your body's fat tissue in each area has responded to your training and/or nutrition program. Each individual will gain and lose fat tissue differently. BodySpec will continue to track these regions with each subsequent scan.
